TD MEANS HAVING MOVEMENTS YOU CAN’T CONTROL

Tardive dyskinesia, or TD, is a condition of uncontrollable movements affecting the face, torso, and other body parts. TD is associated with taking certain medications, such as antipsychotics, for at least a few months.

Here’s a list of questions about uncontrollable movements to discuss.

This questionnaire is not a validated assessment tool, nor is it a diagnostic tool for TD. TD should be diagnosed by a medical professional.

1. Have you ever taken antipsychotic medication(s) to treat any of the following conditions? (Select all that apply)
   - Depression
   - Schizophrenia
   - Schizoaffective disorder
   - Bipolar disorder
   - Anxiety
   - Other: __________________________

2. Have you experienced uncontrollable movements such as pursing, puckering, blinking, jerking, rocking, or twisting in the: (Select all that apply)
   - Eyes
   - Lips
   - Tongue
   - Jaw
   - Upper body
   - Torso
   - Hands/fingers
   - Legs
   - Feet

3. On a scale of 1 to 5, how bothersome do you find these movements?
   - 1: Not noticeable at all
   - 2
   - 3
   - 4
   - 5: Extremely bothersome

4. Has anyone ever noticed your movements? If so, who? (Select all that apply)
   - Me
   - Spouse
   - Family member
   - Friend/coworker
   - Healthcare provider
   - Other: __________________________
